Subject: Draft Formaldehyde Hazard Section Compiled
Attachments: FormaldehydeTRdraft071615.docx

Hi David and Bob,

A couple of weeks ago I promised to send you a compiled Hazard Section for formaldehyde so you could begin to see how the document is shaping up. Bob told me yesterday he would like to take it with him on vacation (so sad).

I have compiled the first section – front sections, introduction and hazard. Not all of the health endpoints are included, but many/most are. You will see that there are a lot of comments and notes; some of the sections have been reviewed by team members and have not yet been revised.

To get oriented, I suggest that you read the preface first as it explains why the hazard section is organized the way it is and how we are using the conclusions from the study evaluations to discuss the evidence.

It will be easier to move around the document if you open the navigation pane (go to “view” in the menu and click the box by navigation pane). This will reveal a list on the left of the headings in each section – like a table of contents. You can click on a heading and be taken right to it. Since the headings are not linked to the table of contents, this is blank so the navigation pane is serving as a table of contents at this point.

The formatting is not exactly standardized although I did attempt to reformat the majority of the document in the IRIS TR styles so it would not be too distracting. There is still a lot of nonIRIS TR formats in the document.

The document is also in the L drive in the formaldehyde folder under 2015 compiled. We will be continuing to revise and add to this over the next several weeks.

-Barbara and Andrew
